
Milling Controller

Lathe Controller

Next Generation CNC Controller

22 PLUS & 220 PLUS Series

Trusted technical service
值得信任的電控夥伴

Profile

About Syntec

Syntec Technology has long been dedicated to the research and development of both software and hardware technologies for machine tools controllers. In recent years, Syntec has expanded its product range to servo solutions, offering products such as drives, motors and encoders. These integrate seamlessly with Syntec CNC controller to deliver not only high performance servo product but also a comprehensive, one-stop solution service for machine tools. Syntec has earned customer trust through excellent after-sales service and has embraced Industrial 4.0 as a core focus of its technological development. Syntec is now one of the most influential and promising brands in the Asia-Pacific market.

PLUS Series Controller 01

Panel Configuration 03

System Components 07

Lathe Controller 09

Milling Controller 11

Intelligent Peripherals 15

Specification - Lathe 21

Specification - Milling 26

01 Next Generation Controller

Latest design with advanced communication control & powerful performance

Brand New Design - Next Generation Controller

01

- Sleek and modern designed display screen
- Provide touch screen option for easier operation
- Available in 15" & 10" screen size for various machine models
- 15" controller features new button layout for efficient operation
- 10" controller features special compact design
- Reliable, oil & dust proof and excellent heat dissipation
- Suitable for 5-Axis machining centre & Turn-Mill machine
- Modular design and automatic system back-up

Powerful & Diversified Communication Interface

02

02

Serial connection, high speed and reliable

Factory Cloud Connectivity

Dual RJ-45 network ports supports both cloud connectivity and on-site tuning or diagnostics simultaneously

Syntec SRI Interface

Expandable A/D, D/A and up to 4096 I/O points through SRI communication interface (Syntec Remote Interface). Supports Modbus RS-485 communication to connect with PLC modules and inverters

Universal CNC Controller

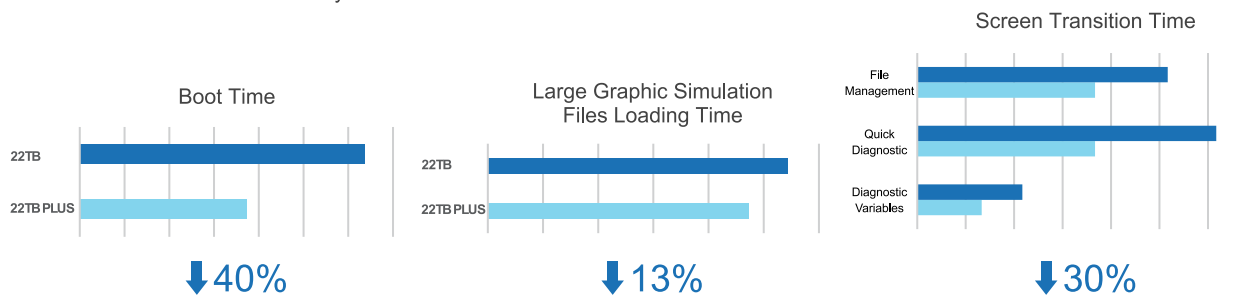

Supports multiple serial communication interfaces, such as Mechatrolink-III & EtherCat

PLUS Series : Significant Performance Enhancement

03

- System boot time reduced by 40%
- Large graphic simulation files loading time reduced by 13%
- Screen transition time reduced by 30%

All-In-One Control

04

- Integration of CNC machining with pick-and-place control functionality
- Flexible robot teaching with pendant controller
- Cost effective and user friendly

Best Combination : Syntec Servo Product

05

Various servo products for machine tools

- Collaborate with well known manufacturers to provide comprehensive servo products solution
- Professional tuning and services make us your best electrical control partner

03 Panel Configuration

Syntec Lathe Controller

Syntec lathe controller features integrated design, high standardization, low wiring costs and minimal space requirements, thereby enhancing cost-effectiveness. By incorporating the latest embedded architecture technology and serial communication interfaces such as Mechatrolink 3 and EtherCAT, it offers superior servo control performance and improved electromechanical integration.

Syntec Milling Controller

Syntec Milling controller adopts the latest embedded architecture, offering high efficiency, stability, and reliability. It supports serial communication interface such as Mechatrolink 3 and EtherCAT, which not only reduce noise interference but also deliver excellent multi-axis synchronous control performance and enhanced scalability for electromechanical integration.

07 System Components

Syntec reserves the right to modify product specifications if necessary

09 Lathe Controller

Trusted lathe controller with advanced turning function

- Complete ISO G Code, corresponds to turning and milling processes
- Friendly insertion of canned cycle enables easy programming
- MPG simulation allows user to control feed rate using MPG wheel
- Suitable for all types of lathe machining including turn-mill, auto lathe, multi-path turning center and 5 axis turn-mill lathe

Friction Compensation (VFF)

- Reduce friction caused by direction reversal
- Easy and quick automatic parameters tuning
- Supports multiple RF.Velocity tuning (Max 5 sets), automatic compensation for different radius & feedrate

Tilted Working Plane Machining

- Intuitive and easy to program NC by rotary absolute coordinate system
- Milling, drilling, and tapping on inclined planes can be easily performed through NC program without complex CAD/CAM processing

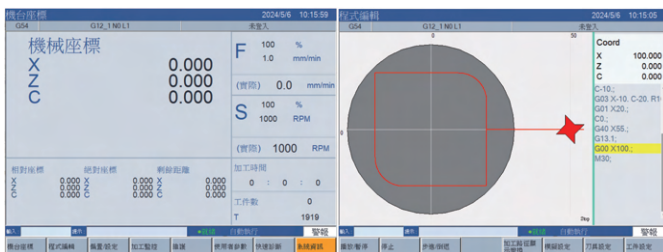

Modern HMI with Graphical Simulation

- New HMI design with unchanged operation process
- MDI function allows quick command input and execution
- Support colour configuration for different tools ID
- Support G12.1 machining path simulation (Optional)

Servo Tailstock & Auto Tool Measurement

- Torque controlled for servo tailstock with dedicated HMI
- Provides multiple force setting configuration
- Supports auto tool measurement for turning & milling tools
- Complete manual and automatic tool measurement operation

Syntec reserves the right to modify product specifications if necessary

11 Milling Controller

High-performance milling controller equipped with multiple high-speed & precision features

- Powerful computing performance : Process up to 3,000 blocks per second
- High speed & precision : Servo lag compensation, high-precision trajectory control & multiple machining condition
- Flexible axis configuration : Up to 18 axes, suitable for machining centers, tapping machines, five-axis & multi-path milling machines

Tapping Center Tool Magazine Tuning

Stable Tool Change & Easy Tuning

- Dedicated interface for point teaching
- Smoother and faster tool change

Smooth Acceleration Mode (G64.4)

High Speed High Precision

- Optimize speed for short blocks generated by CAD/CAM software, enhancing movement stability and smoothness
- Suitable for complex surface mold machining, such as wheel rim processing

Smooth Precision Advance (SPA3.0)

Enhanced servo response boosts machining accuracy

- Eliminates servo lag and enhance arc path accuracy under high speed machining
- Improves overcut during G0 feed for cutting tools

Gantry Machining Center Solution

Gantry Calibration & Balance Tuning

- Gantry calibration: Automatically aligns mechanical coordinates to improve repeatability and accuracy
- Gantry balance tuning: Aligns the load of two gantry axes to minimize twisting and distortion

Rotary Axis Auxiliary Function

Index Table & Automatic Braking

- Index Table, prevent mechanical damage in automatic and manual mode
- Automatic Braking, auto release and engage brake without M-Code input
- Index Table can work in conjunction with the automatic brake function

13 Milling Controller

5-Axis CNC Solution (Optional for specific models)

Rotation Tool Center Point (RTCP)

01

Scenario :

Workpiece with varying curvature, 5-Axis Machining Center, 5-Axis Woodworking Machine etc.

Instructions :

Rotation Tool Center Point (RTCP) function provides high machining precision by transferring the control target from tool holder to tool tip through five-axis compensation

G-Code:
G43.4
G43.5

Smooth Tool Orientation

02

Scenario :

Machining issue caused by unexpected block variation in tool vector generated by CAM.

Instruction :

The controller pre-process the machining path, smoothing the tool orientation and reducing TCP jerking issue

G-Code:
G43.4 L2

Feature Coordinate System

03

Scenario :

Three-axis machining on the feature plane of the workpiece

Instructions :

Also known as inclined plane coordinate system, it allows machining on any workpiece plane using three-axis machining programs without the need of complicated CAM

G-Code :
G68.2 X_Y_Z_ I_J_K_;
G68.3 X_Y_Z_ R_
G68.3 P1 X_Y_Z_

Spatial Alignment of Workpiece

04

Scenario :

No need to re-adjust or re-clamp workpiece on jig, reduce preparation time.

Instructions :

By inputting rotation angle in the workpiece coordinate system and rotation compensation can be activated in the NC program using G54.4 P1.

Tangential Control

05

Scenario :

Cutting tool and NC file machining path must maintain a fixed angle to cut workpiece

Instruction :

Using G41.1/G42.1, the cutting tool is maintained at a consistent angle relative to the path direction. CAM only needs to generate TCP path (X, Y, Z).

3D Tool Compensation

06

Scenario :

Compensation for tool radius or wear on the side edge is required during machining under RTCP, without the need to regenerate machining file in CAM.

Instruction :

Using G41.2, G42.2, G41.6, and G42.6, tool radius and wear compensation can be applied to paths with tool orientation changes, while supporting two TCP control modes, G43.4 and G43.5.

Constant Surface Speed Mode

07

Scenario :

Suitable for machining paths with small TCP displacement and large rotational axis displacement, preventing a reduction in cutting speed that could affect the surface quality of the workpiece.

Instruction :

Constant surface cutting speed control improves cutting speed stability, while enhancing surface accuracy and finish quality.

Multi Kinematic Chain

08

Scenario :

Cross head machine, stone machine and machine with multiple mechanism chain

Instruction :

Suitable for five-axis machine with multiple mechanism chain. Allow users to set and enable multiple mechanism parameters and activation of TCP control

15 Intelligent Peripherals

Syntec Servo Solutions

01

SVD/SPD Single-Axis Servo Drive

- Supports multiple serial communication encoder
- Complete electromechanical integration
- Power : 1~55 (KW)

AM Servo Motor

- IP67 waterproof and dustproof protection rating
- Power : 0.1~15 (KW)
- Maximum Torque : 0.32~224 (Nm)
- Maximum Speed : 2,000~6,000 (RPM)

SMD/SMH Multi-Axis Servo Drive

- Suitable for machine tool industry
- Supports up to 3+1 axis servo control
- Enhanced features (Auto tool retraction, friction compensation etc)
- Axial Power 1~3 (KW) ; Spindle Power 7.5~18.5 (KW)

SP Spindle Motor

- Syntec high resolution encoder, precise & stable
- IP54 waterproof and dustproof protection rating
- Power (S2) : 5.5~37.5 (KW)
- Maximum Torque : 10.4~355 (NM)
- Maximum Speed : 6,000~24,000 (RPM)

Live Tool Motor

- Designed specifically for turn-mill cutting tools
- IP67 waterproof and dustproof protection rating
- Power : 1.7~5.7 (KW)
- Rated Torque : 8~18 (NM)
- Maximum Speed : 8,000 (RPM)

C-Series Water-Cooled Spindle Motor

- Enhanced temperature control, reduced vibration & fanless design enables excellent machining quality
- Suitable for long duration, high precision machining
- Maximum speed 12000/15000 RPM, optional central coolant outlet

Syntec Disk Type Spindle Motor

- External mounted ultra thin disk type spindle motor
- Seamless upgrade to integrated spindle motor
- Simple Structure : No bearings, no fans & no belts
- Supports usage with spindles ranging from A2-4 to A2-6
- Power (S2) : 6.3~22.5 (KW)
- Rated Torque : 17~90 (NM)
- Maximum Speed : 4,000~8,000 (RPM)

Syntec Encoder

- Support side & top connection
- High precision & resolution, suitable in harsh environment
- Resolution : 262,144~1,335,296 (Pulse)
- Poles : 64, 82, 102, 124, 162, 242, 326

17 Intelligent Peripherals

Controller and Drive Integration

Syntec controllers and drives offer extensive integrated functions, enabling servo data to be synchronized with controller in real time through Mechatrolink-3 communication interface, achieving intelligent integration between controller and drive.

Intelligent Power Failure Protection

- Controller will initiate deceleration to stop and raise the Z-axis if power outage is detected, preventing potential damage to the machine and personnel from an abrupt power loss.
- Controller will only initiate deceleration to stop in order to prevent damage to the machine during tapping or other special process

High Speed G31

- Drive reads and sends signals from probe and tool presetter to controller, achieving faster response times than I/O scanning
- Improve measurement speed & repeatability, effectively enhancing measurement efficiency.

Syntec Tuning (One Step Tuning)

- Simple and fast servo tuning through controller HMI without computer
- Functions: Inertia ratio, resonance suppression & velocity loop gain tuning

81R Robot Controller

CNC Controller + All In One

81R Robot Controller	
Features	<ul style="list-style-type: none"> • Easy point teaching with handheld controller • User friendly tray setting interface • Suitable for complicated pick and place application
Application	<ul style="list-style-type: none"> • Robot arm for complicated movement • Any length of stroke • Robot arm attached to lathe machine

All In One	
Features	<ul style="list-style-type: none"> • Control by G-Code & M-Code • Connect to CNC directly, reduce usage of external signal • Easy to customize
Application	<ul style="list-style-type: none"> • Gantry attached to machine • Built-in robot

Features Introduction

- Highly integrated machine & robot, lower the barriers of automation implementation
- Friendly setting and programming GUI
- Single controller fulfills both CNC machining and gantry pick-and-place function
- Supports multiple functions such as safety zone configuration, reference point setting etc

19 Intelligent Peripherals

Intelligent Measurement

04

Syntec's tool integration module incorporates tool setters and probes, offering a variety of measurement modules. These modules are continuously updated to meet industry-specific applications, helping machining factories achieving intelligent upgrades.

Tool Measurement

Probing

iCheck-5 (5 Axis Mechanism Chain Measurement/Analysis/Verification)

Controller Measurement Integration

05

Syntec Technology, in collaboration with Renishaw, has developed a series of user-friendly inspection GUIs that significantly simplify the measurement and inspection process, helping users effectively improve workflows and increase machining yields

Inspection Plus (Probing System Solution)

AxiSet (Multi Axis Machine Performance Inspection)

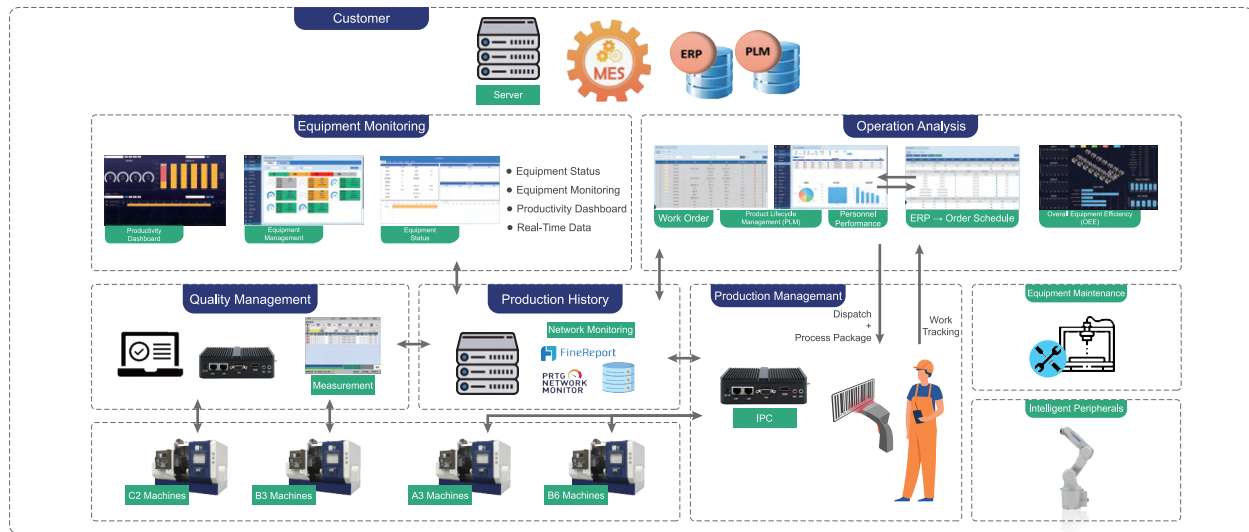

Tool Calibration Solution

SynFactory

06

Analytic Platform

07

Syntec analysis software provides quick servo tuning & NC commands/feedback visualization for easy troubleshooting

Complete Servo Tuning

Adjacent Path Analysis

PLC Timing Analysis

3D Curvature Analysis

Syntec CAD/CAM

08

Syntec CAD/CAM offers highly integrated turn-mill technology with Syntec controller.

Irregular Threading

Dynamic Turning

Collision Detection

Tool Setting

End Face Interpolation Milling

Spiral Milling
